## **STRONG PASSWORDS**

It is critical if you don't want your account hacked (broken into), that everyone use "strong passwords" from now on. If your old password(s) are weak, we suggest you change them immediately. If you need assistance, we can help.

-----

This is the definition of a strong password. Read it carefully.

"A password that is difficult to detect by both humans and computer programs, effectively protecting data from unauthorized access. A strong password consists of at least eight characters (and the more characters, the stronger the password) that are a combination of letters, numbers and symbols (@, #, \$, %, etc.) if allowed. Passwords are typically case-sensitive, so a strong password contains letters in both uppercase and lowercase. Strong passwords also do not contain words that can be found in a dictionary or parts of the users own name."
